ELRICK HANDCARVED STEVE LAWSON CUSTOM FRETLESS E-VOLUTION 6-STRING BASS GUITAR

Elrick Bass Guitars, Ltd. is excited to announce the newest addition to their award winning line of basses; the Gold Series SLC - Steve Lawson Custom Bolt-on neck Bass Guitar!

Inspired by one of a kind solo bass performer and old friend, Steve Lawson. A semi-hollow body featuring a "heel-less" body design is one of many unique design features found on this special bass guitar. A 33" scale neck is attached using five bolts in an asymmetrical pattern for exceptional stability and playability, while a thru-body string option makes possible the use of standard scale strings.

A Macassar ebony fretboard and custom Aero single coil pickups (featuring matching wood covers) in passive configuration contribute to the clarity and articulation of this instrument. Combined with the medium scale length, 17mm string spacing and 2" neck width at the zero fret (on 6-string model) accommodates chordal players as well as soloists. Controls consist of dual volume, passive tone, and optional 3-way pickup selector and push-button momentary/kill switch for special effects. Glow in the dark side dot position markers and book-matched exotic wood top are standard features.

Steve Lawson Custom 4-String bass prices start at $5,100
